

# ETC Project Profile

## Engineered Septic System Elementary School, Donagh, PEI

Client: PEI Dept. Transportation  
and Public Works

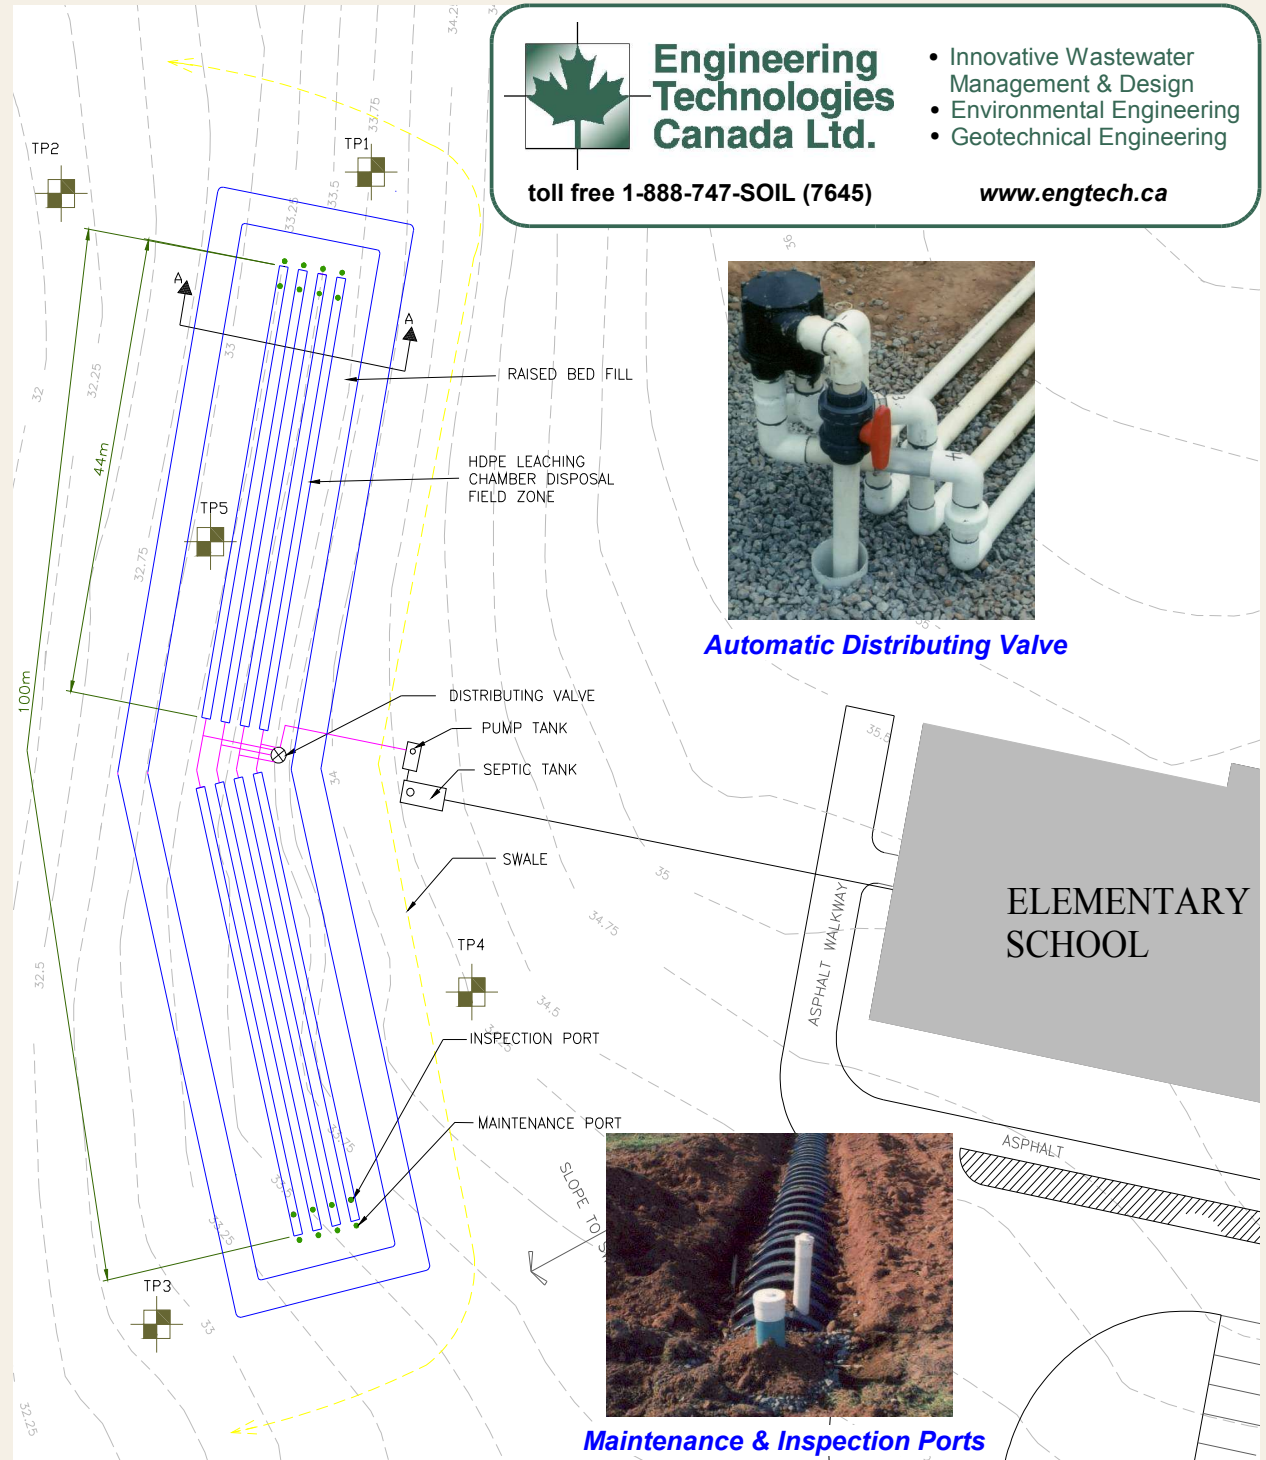

Engineering Technologies Canada Ltd. (ETC) has developed and refined a state-of-the-art, pressurized **HDPE Leaching Chamber** septic system design.

Each system is customized to suit the specific soil, rock, groundwater conditions and topography so that it blends into the existing landscape.

The ease with which the system can be expanded is made possible through the use of an innovative **Distributing Valve** first introduced to the Maritimes by ETC engineers. **Inspection** and **Maintenance Ports** ensure the system is easy to monitor and maintain.

This system has provided cost effective on-site sewage treatment and disposal for numerous commercial, recreational and institutional developments such as this new school in Donagh, PEI.
